

How to Care for the Euphonium

BEGINNING BAND

How to Assemble & Care for your Euphonium

- Take your instrument from its case, grab your mouthpiece, and insert it into the lead pipe.
- Give the mouthpiece a quarter turn to secure it.
- Make sure your slides and valves are moving smoothly. Grease or oil as needed.
- To grease a slide, remove it, wipe it clean, and apply a small amount of slide grease to the ends of each side. Reinsert it and slide it back and forth.
- To oil a piston valve, unscrew the cap and remove it carefully. Apply a small amount of valve oil on each part. Reinsert the valve so the guide is lined up and screw it back on until it is snug.
- After practicing, empty water through the spit valves and slides as needed.
- Remove the mouthpiece and wipe as needed. Secure the instrument back in the case.
